1. Introduction

PVGWocto is an addin that allows you to play to Octopus Game, named OC-22 who wa selled in shops in 1981.

2. Installation

Uncompress the file PVGWocto10.zip, where the following files are found :

- PVGWocto_fre.bin :   French client application to install on your PV, using PVM program.
- PVGWocto_eng.bin :   English client application to install on your PV, using PVM program.

- UserGuide_eng.rtf :   This guide.
- UserGuide_fre.rtf :   This guide but in French.
- Version.txt :   History version of the program.

 Icon application that is shown on your PV after installing it with PVM.

3. Running

When you start PVGWoctopus, you can choose game A or B The only difference is in game speed. In demo mode, PVGWoctopus show you what time it is.

Diver enters water to retrieve sunken treasure.

Octopus' tentacles try to grab him as he heads for the treasure.

By operating the switch on the right, diver puts jewels into bag and surfaces.

When three divers have been caught, game ends.

4. Options

The options menu allow you to consult the actual version of PVGWoctopus and to consul the high scoresin game A or B.

5. Compatibility

PVGWoctopus use the flash memory management named SHARED to minimize the used of it. You should used an addin like sCleaner to delete PVGWoctopus entries in this flash memory (best scores and game speed).
